

Save your pipes.

NEVER FLUSH WIPES!

(even if they say they're flushable)!

HELP US AVOID COSTLY CLOGS

Many sewer blockages occur between the house and the utility's sewer main, where the property owner is responsible for correcting the problem. Help the property owner avoid blockages.

Unlike toilet paper, many hygiene products and wipes don't break down once they are flushed. Wipes, even those that are labeled as flushable, can clog the sewer pipes. On a larger scale, when these products make their way into the public sewer system, they can collect together and cause blockages in the sewer mains, get tangled up in pump equipment and result in service problems. So, instead of flushing these items down the drain, throw them in the trash.

BOTTOM LINE

These products can clog the sewer pipes and result in a nasty repair bill for the property owner. Instead of washing these items down the drain, throw them in the trash. Learn more at newjerseyamwater.com. Under Water Quality, select Wastewater Treatment.
